FISH DESCRIPTIONS

FALL 2021

Channel Catfish: Outstanding food and sport fish. The species is compatible in lakes and ponds with all fish and works well with Hybrid Sunfish and Largemouth Bass. Growth rates average 1 lb. per year if fed a commercial feed.

Largemouth Bass: One of the most popular fish in America. They are predators and help control stunted Bluegill and Crappie populations. Can grow up to 1/2 to 3/4 pound per year.

Fathead Minnows: Stock in new ponds prior to stocking Largemouth Bass so that they have the opportunity to spawn and provide plenty of feed for the young Bass.

Hybrid Sunfish: Produced by crossing a male Bluegill with a female Green Sunfish. This hybrid cross produces a 90% male, 10% female population, which makes the Hybrid Sunfish an excellent pond fish as it will not overpopulate. The Hybrid Sunfish readily accepts artificial feed and grows to a much larger size than either parent (1-2 lb. fish are not uncommon). Growth rates average 1/4 - 1/2 lb. per year.

Bluegill: Fit much of the description of the Hybrid Sunfish except they do not grow as quickly as Hybrid Sunfish. Grows up to 1/2 pound per year.

Redear: Recommended for deeper ponds and can be stocked along with Bluegill or Hybrid Sunfish. They are a deep water fish, feeding on snails or clams, and are usually harder to catch except during spawning season when they are in the shallows. Can grow up to 1/3 pound per year.

Triploid Grass Carp: Eat aquatic vegetation, but not algae. This fish will not reproduce. These Carp eat most aggressively in the hot, summer months. Good results are usually seen after a second season. They will eat up to 2-3 times their weight each day.

PICK-UP INSTRUCTIONS

ALL fish will be bagged with water at the time of pick up.

Please bring coolers, Rubbermaid totes, boxes, etc. to place your bags in for the trip home so that bags do not roll during driving.
