 Bloomington, IL 61705

FISH DESCRIPTIONS

Fathead Minnows: Stock in new ponds prior to stocking Largemouth Bass so that they have the opportunity to spawn and provide plenty of feed for the young Bass.

Channel Catfish: Outstanding food and sport fish. The species is compatible in lakes and ponds with all fish and works well with Hybrid Sunfish and Largemouth Bass. Growth rates average 1 lbs. per year if fed a commercial feed.

Albino Catfish: Identical to Channel Catfish except white skin and pink eyes.

Hybrid Sunfish: Produced by crossing a male Bluegill with a female Green Sunfish. This hybrid cross produces a 90% male, 10% female population, which makes the Hybrid Sunfish an excellent pond fish as it will not overpopulate. The Hybrid Sunfish readily accepts artificial feed and grows to a much larger size than either parent. Growth rates average $\frac{1}{4}$ - $\frac{1}{2}$ lb. per year.

Bluegill: Fit much of the description of the Hybrid Sunfish except they do not grow as quickly as Hybrid Sunfish. Grows up to 1/2 pound per year.

Black Crappie: Excellent for food and sport fishing. Very prolific and not recommended for ponds under 5 acres. Schooling fish that like lots of structures and hiding places; excellent at controlling insects. Can grow up to 1/4 pound per year.

Redear: Recommended for deeper ponds and can be stocked along with Bluegill or Hybrid Sunfish. They are a deep water fish, feeding on snails or clams, and are usually harder to catch except during spawning season when they are in the shallows. Can grow up to 1/3 pound per year.

Largemouth Bass: One of the most popular fish in America. They are predators and help control stunted Bluegill and Crappie populations. Can grow up to 1/2 to 3/4 pound per year.

Triploid Grass Carp: Eat aquatic vegetation, but not algae. This fish will not reproduce. These Carp eat most aggressively in the hot, summer months. Good results are usually seen after a second season. They will eat up to 2-3 times their weight each day.

HB Black or Blue Pond Dye: Can be used to limit sunlight penetration and help limit algae & vegetation growth. We recommend 1 quart of blue and 1 quart of black per acre.

HB All Seasons Blend Bacteria: A blend of 23 essential vitamins, bio-stimulants, catalyzing enzymes, and select warm and cold water biological species custom blended for lakes and ponds. Recommend 4 lbs per surface acre for initial treatment, then 2 lbs per surface acre per month.

Triton High Protein Fish Food: This is a 45% protein (fishmeal based) fish food that can be fed to fish to increase growth rates and enhance the overall health of the fish.

Texas Hunter Automatic Fish Feeder: A premium fish feeder with a 75 lb capacity that is operated by a programmable timer and powered by a 12 volt battery and solar panel (all included).

Questions about stocking? Contact our IDNR Fish Biologist, Mike Garthaus at mike.garthaus@illinois.gov

PICK-UP INSTRUCTIONS

All fish **BESIDES** Channel/Albino Catfish will be bagged with water at the time of pick up. **Please bring coolers/garbage cans with pond water if you ordered Catfish.**

Please bring coolers, Rubbermaid totes, boxes, etc. to place your bags in for the trip home so that bags do not roll during driving.
